API BLITZ

FREQUENTLY ASKED QUESTIONS

Three APIs. One product. One database. One winner.

API Blitz is a time-bound product-building competition in which two-member teams build a meaningful product using three randomly assigned APIs from a pool of five.

About the Event

1. What is API Blitz?

API Blitz is a time-bound product-building competition. Each team receives three randomly assigned APIs from a pool of five and must build one meaningful product that combines all three.

2. How many people are in each team?

Each team consists of two members.

3. How many APIs must we use?

There are five APIs in the pool, and each team is assigned three. All three assigned APIs must contribute meaningfully to the final product.

4. Can we change our assigned APIs?

No. The three randomly assigned APIs become the team's challenge and cannot be changed.

5. What is the Surprise API?

At a predetermined point during the build, teams may be given an additional API to integrate into their existing product. The event plan labels the Surprise API as optional, so follow the final instructions shared by the organizers.

6. What kind of product can we build?

You can build a useful, interesting, or entertaining product. It may include a frontend, backend, API integrations, and database functionality.

Building and Technical Requirements

7. What does meaningful API integration mean?

Each assigned API should contribute to the product's core experience. APIs should not be included merely as minor add-ons or disconnected features.

8. How long is the main build session?

The main competition is a six-hour build session on 26 October.

9. Can we continue working after the six-hour build?

Yes. After the main build session, teams can continue fixing bugs, testing, deploying, polishing the UI, finalizing Neon integration, completing the README, and preparing their submission until the deadline.

10. What is Neon used for?

The event plan includes Neon integration and requires teams to submit the required Neon evidence. Refer to the official instructions from the organizers for the exact setup and evidence format.

Submission and Evaluation

11. What do we need to submit?

The final submission consists of the project repository, deployed application, and README. Teams must also submit the required Neon evidence.

12. When is the submission deadline?

The event plan lists 27 October as the submission deadline. Submit by the exact cutoff time announced by the organizers.

13. What happens during internal evaluation?

On 28 October, judges review eligible submissions using preliminary criteria that include creativity, product fit, technical execution, UI/UX, and use of the Surprise API. Teams are ranked, and finalists are selected. Participants do not need to attend this phase.

14. How many teams qualify for the final?

The event plan says the top seven teams from each group advance, producing 14 finalist teams.

15. What are the judging criteria?

The preliminary evaluation considers creativity, product fit, technical execution, UI/UX, and use of the Surprise API. Final judging considers the product and creativity, technical implementation, API integration, UI/UX, and the final pitch.

Final Round and Prize

16. When is the final round?

The final pitching round is scheduled for 29 October.

17. What happens during the final round?

The 14 finalist teams pitch their products, explain the problem and solution, describe the technology and overall concept, and demonstrate their working applications. Judges then evaluate the finalists and determine the winner.

18. Do all participants need to attend the final?

According to the event plan, only the 14 finalist teams participate in the final round.

19. What is the prize?

The winning team receives $100 in Neon credits to continue developing its project after the competition.

Schedule at a Glance

Date	Phase	Who is involved?
Before 26 Oct	Preparation, API testing, judging setup, participant communication	Organizers
26 Oct	Six-hour build session and Surprise API activity	All teams
26–27 Oct	Finalize and submit projects	All teams
27 Oct	Submission deadline	All teams
28 Oct	Preliminary evaluation and finalist selection	Judges and organizers
29 Oct	Final pitches, judging, and winner announcement	14 finalist teams

Important Reminders

- Use all three assigned APIs meaningfully in one product.
- Do not change your assigned API combination.
- Complete the repository, deployed application, README, and required Neon evidence before submitting.
- Follow the final instructions from the organizers regarding the Surprise API and the exact submission cutoff time.
